PROJECTS

STATE QUARTERS COLLECTOR

Single-page application enabling my family to collaborate on a 50 state quarters collection for my nieces and nephews. What began as a hand-written list of state quarters in a coffee mug, is now deployed to the web via Heroku. Written in REACT with JSON-server API. Biggest lesson learned: the dire consequences of ambiguous variable names.

https://github.com/gradyrobbins/fifty

FOURTH STAR

Server-side application built for aspiring soccer players of all ages to improve their skills by creating an individual training regimen. This application has an MVC architecture using C#, Entity Framework, and a SQL Server database. Biggest lesson learned: GitHub's projects tab improves communication and workflow.

EDUCATION

FULL STACK WEB DEVELOPMENT
DATA ANALYTICS (INCOMPLETE)
NASHVILLE SOFTWARE SCHOOL

BACHELOR OF ARTS - LIBERAL ARTS
AUBURN UNIVERSITY

EXPERIENCE

CREATING A HEALTHIER WORLD, ONE PERSON AT A TIME
VARIABLE DATA PUBLISHING

- *Develop, upload, and publish customizable marketing materials for the Blue Zones Project and ShareCare*
- *These assets empower community engagement leads to tailor their marketing materials, update copy, photography, design elements, sponsor logos*
- *The Blue Zones Project includes 51 communities across North America. Participating communities have experienced double digit drops in obesity and tobacco use, saving millions of dollars in healthcare costs.*
- *Tech stack: Adobe InDesign, Adobe Acrobat, FusionPro plug in, MarCom Central, HubSpot*

SOFTWARE DEVELOPER

NASHVILLE SOFTWARE SCHOOL

Intensive, full-time software development bootcamp focusing on full stack development fundamentals and problem solving

- Object Oriented Programming through group and individual projects reflecting real world business problems
- Project management and tracking using Github Projects
- JavaScript fundamentals leveraging modular code, reusable components
- Distributed version control with Git/GitHub
- Single-page applications with HTML, CSS, and JavaScript
- Incorporating libraries like React and frameworks like Bootstrap
- Task automation with Grunt, linting with JSLint, module bundling with Browserify, npm package installations
- Create and deploy personal website: www.gradyrobbins.github.io
- **Individual Assignment** - Ternary Traveler - Vanilla JavaScript CRUD application for a travel blogger to add points of interest to their itinerary, built using Browserify and JSON-Server
- **Team Welcome to Nashville -** Vanilla JavaScript `fetch` to external APIs. My role in this group project enables a user to search Nashville's local parks
- **Team Nutshell -** Client-side JavaScript application lets users organize their daily tasks, events, news articles, friends, and messages. Written in vanilla JavaScript, refactored with REACT
- **Team Bangazon -** Server-side Web API with MVC architecture. My role was to build a model and controller for our product offerings, and incorporate integration testing
